Walk-in/ Slide-in Bathtubs

The Optimum Solution for Safe and Comfortable Bathing

Hydro Massage is proud to offer a line of walk-in tubs when you need or desire a safer and more comfortable bath experience.

Medical Hydrotherapy Benefits

The therapeutic value of water therapy has been recognized for thousands of years. Temperature, buoyancy, and jetted massage work separately or in concert to help heal and soothe aches and pains related to many common illnesses and diseases.

Especially in situations when aging or illness affect your health, having continual access to a whirlpool bath with a walk-in tub model can increase your well-being physically and emotionally. Hydrotherapy is recognized as helpful with conditions and diseases including arthritis, diabetes, back pain, and insomnia.

Among the many documented benefits of hydrotherapy are the following:

Increases blood circulation

Improves joint flexibility

Improves sleep

Relieves aches and pains and relaxes muscles

Reduces blood pressure

Reduces stress levels

Reduces stiffness and inflammation

This information is provided as a service only and should not be interpreted as medical advice. Please seek the advice of your healthcare provider related to the use of hydrotherapy for your personal health issues.

Safety and Design Features

Each tub incorporates important safety features such as safety bars and non-skid flooring. Special easy-open handle and a guaranteed no leak door system enhance all our walk-in tubs, and they are fully customizable. You can design the ideal bath environment with air therapy, water therapy, or a combination of both in your tub, and add aromatherapy and chromatherapy options to enhance your sense of well-being.

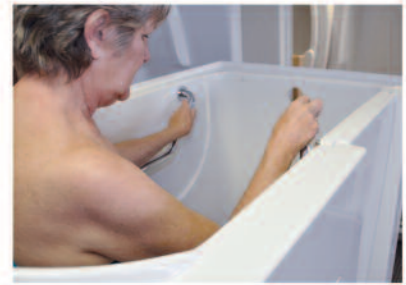

Safety First

Safety features such as a well placed safety bar for balancing and a non-skid floor for good footing are important elements for people of all abilities.

Easy-Open Handle

The revolutionary handle is designed for easy opening and closing to ensure a tight waterproof seal.

Hardware

Decorative valve and fill spout with hand held shower.

No Leaks–Lifetime Guaranteed

Simple door seal ensures no leaks for the life of the tub. No moving parts to wear out or maintain and the best part is the more water you fill into the tub the tighter the seal gets.

Easy Access to Equipment

Removable panel facilitates easy access to the plumbing, pump, and jets. The panel is easily attached and removed.

Walk-in, Slide-in Transitional Bathtubs...

*offer freedom from
the worries of unsafe bathing.*

Safe bathing is achieved when you can depend on a product designed with safety in mind. Hydro Massage Accessible Bathtubs are manufactured in America and they will exceed your expectations.

Access your Walk-in Bathtub safely and easily through a walk-in door designed to eliminate stepping-over a traditional bathtub barrier. The door seal has a lifetime guarantee for years of service without leaking. If the seal ever fails, we will replace it. Our Walk-in bathtubs are designed to fit in the space of the standard tub/shower in your home.

Our RM3 Slide-in bathtub is designed to help those with mobility issues to bathe independently in their home. The outward swinging door allows wheelchair access and the seat is positioned so that the individual can slide over and then swing their legs into the bath.
