

You will LOVE the comfort and relaxation of a well-designed bath.

Competitors without Comfort Package

With HydroMassage Comfort Package*

Details matter. When you're investing in a jetted bathtub, comfort is key to a good bathing experience. HydroMassage offers you the following comfort features, which are not available in most other manufacturer's models.

1. Deep Enough Hot Water Level

What good is a hot bath when the water level only reaches your belly? You get cold quickly. **Our baths allow the hot water to cover your upper chest and shoulders. You stay warm and comfortable!**

2. Armrests Perfectly Placed

Many baths don't offer armrests. Your arms are either cramped inside the tub, or resting on the lip of the tub, which is too high and creates tension in your neck and shoulders. Flat armrests aren't much better. **Our baths have ergonomically designed armrests that allow your elbows to be down and your hands up, releasing tension in your neck and shoulders.**

3. Relaxing Back Reclined Position

Your bathtub should feel like a recliner chair. Some baths force you to sit almost straight up, which is not comfortable. **Our baths have a sloped back from 115 – 130 degrees, which lets you lay back comfortably.**

4. Room to Stretch Out

Baths that don't allow your legs to stretch out make you feel cramped and uncomfortable. **Our baths give you the space to stretch out and straighten your legs, for comfort and options to move around more.**

"We have owned several jetted products in the past so this is not our first rodeo. The flexibility to purchase a tub that fits the person and offers the features to the user's needs were the criteria that won our search. It's the first time I ever had a tub that fits me!"
