

An amazing massage starts with high performance pumps!

Exclusive Performance ONLY from Hydro Massage!

Hydro Massage Double Super Flo Pump and plumbing system has up to **160% more power!**

Hydro Massage Super Flo Pump and plumbing system has up to **80% more power!**

Most companies

Sometimes the things you can't see are the most important. The heart of all jetted baths is the pump and plumbing system. **Since this is the second most expensive part of a jetted bathtub, many companies try to save money by using small, low performing pumps with low water flow.**

Powerful Hydro Massage pumps and heaters

Our American-made 3.25 HP, 3-speed Super Flo* pump delivers up to 80% more water flow through our exclusive ultra clean plumbing system. We have researched and tested extensively to provide the best massage available in a therapeutic tub when combined with our therapeutic jets. You can choose deep tissue, medium or soft tissue massage. We believe in our pump so much that we will replace it for your lifetime. To keep you warm and cozy in your bath. We also include our stainless steel high capacity heater, which is the most powerful 115v heater in the industry. It comes with a smart thermostat and internal on/off switch, which automatically turns the heater on and off as needed when the temperature is below 104°.

Made in America Super Flo 3.25 HP 3-speed pump with stainless steel heater has up to 80% more power and performance for the best massage on the market.

Smaller, cheaper low-performance pump are used by most companies.

“What was really important to me was a very powerful therapy system. It is probably the most powerful jet tub that I’ve ever been in!!”

Our Super Flo is standard on most therapeutic series. Verify size and number of pumps before purchase.

How to find a therapeutic bath for your health. Not one that just makes bubbles.

Most competitors use 30-year-old technology, small jets in their jetted baths.

Each **AccuMassage** jet provides a pulsating flow to a 1 1/2" area on your back as part of Hydro Massage's back massage system.

Hydro Massage **Ultra Massage** jets are pulsating and cover a wider range than most competitors.

Hydro Massage exclusive **Sole Soother** jets target the feet like fingers.

Hydro Massage **Ultra Flow** jets are powerful, directional jets that let you control placement where you need it.

It's all about the jets! Yes, beauty is important, but if you want the best massage for your body, you need to pay attention to the jets. Current technology, placement, and design are critical.

Many other companies use only one type of jet, the 30-year-old technology eyeball bathtub jet, used throughout the bath. These jets produce a small stream of water, approximately the size of a pencil, which hits a small surface area on your body, which can become annoying. These jets are typically positioned 8-10" off the floor off the bath, which creates a lot of water movement on the surface, but doesn't provide a massage where your body has pain.

At Hydro Massage, we approach jets differently. We want our baths to provide the optimum therapeutic massage, otherwise why do you get a jetted bathtub?

Here's what we do:

1. We use new technology therapeutic spa jets
2. We use four different types of jets, to provide the optimal massage for different parts of your body.
3. For your best back massage, we use the **AccuMassage** pulsating jets that deliver a soothing massage covering 1 1/2" circular area on your back instead of 1/4".
4. For your feet, we offer two solutions: one is the **Ultra Massage** pulsating jet that delivers relaxing massage to your feet and covers a 3" circular area to the soles of your feet. These jets are pressure adjustable.
5. The other option for your feet is our exclusive **Sole Soother** reflexology foot massage system. Each sole soother has 7 individual ports which feel like 7 fingers massaging the sole of your foot in a 3" circular area on your foot where there is over 214,000 nerve endings. These jets are pressure adjustable.
6. For your hips, knees, and hands we provide the **Ultra Flow** jets. These deliver a powerful stream of water to these areas of the body and are directional plus pressure adjustable, so you can aim the large stream water to different areas.

"Hydro Massage helped us pick out a tub that would work and what was really important to me was the very powerful therapy system they got me into. They found the right setup, including all the different therapy features from the jets to the air. It is probably the most powerful jet tub that I've ever been in!"
